Education

Universidad Austral **Feb. 2023 – Dec. 2027 (Exp.)**
B.S. in Software Engineering, Minor in Artificial Intelligence *Buenos Aires, AR*

Relevant Coursework
Artificial Intelligence, Algorithms & Data Structures, Software Design, Concurrent Programming, Databases, Operating Systems

Experience

IntegridAI | *TypeScript, NestJS, Next.js, Anthropic, ElevenLabs, PostgreSQL, Docker, Supabase, Vercel* **Feb. 2026 – Present**
Product Engineer *Buenos Aires, AR*

- Own product for a 5-person team building a compliance management platform that helps SMEs meet Argentina's anti-corruption law requirements
- Ran 8 validation sessions with 5 stakeholders, using AI tools to prototype rapidly and confirm 20+ features that shaped the backlog and roadmap
- Shipped real-time voice simulations for compliance training end to end by integrating ElevenLabs Agents for live voice conversations and the Claude API as an LLM-as-evaluator
- Cut token usage by 8.1% and cost by 14.6% on production models while maintaining evaluation quality by benchmarking 6 LLMs in Braintrust

Projects

Agent Orchestra | *Python, OpenAI API, ChromaDB, Langfuse* **Apr. 2026 – Jul. 2026**

- Co-built a multi-agent coding assistant with an orchestrator, 5 specialized sub-agents, and 9 tools
- Enforced safe, resumable execution by designing a permissioned tool dispatcher and a 3-tier memory system
- Grounded responses in official documentation by building a RAG pipeline over 28 documents in ChromaDB
- Achieved 99.3% error-free execution across 280 instrumented spans by tracking cost, token usage, and retrieval quality in Langfuse

Snippet Searcher | *Kotlin, TypeScript, Spring Boot, React, PostgreSQL, Redis, Docker, Azure* **Aug. 2025 – Dec. 2025**

- Led development of a code snippet management and sharing platform on a 4-microservice architecture, powered by a custom language toolchain for a TypeScript subset
- Implemented the core language pipeline by building the lexer, parser, interpreter, and formatter from scratch
- Validated the language toolchain against an external TCK, passing all 49 scenarios under a 7MB heap limit
- Improved responsiveness by offloading time-intensive tasks to asynchronous inter-service communication using Redis

Sonora | *TypeScript, React, Tailwind CSS, NestJS, Prisma, PostgreSQL, Docker, Azure* **Aug. 2025 – Nov. 2025**

- Co-developed a music social web app for browsing and reviewing albums, artists, and tracks
- Enabled music discovery across Spotify's 100M+ track catalog by integrating the Spotify API to import artist, album, and track metadata along with 30-second audio previews
- Delivered core social features end to end, including album and track reviews, review reactions, and user profiles

Achievements

Your Time, Your World Cup (AI Competition) | *TypeScript, React, Express, OpenAI, Google Calendar, Railway* **Jun. 2026**
1st Place

- Co-developed a web app that classifies all 72 FIFA World Cup 2026 group-stage matches into interest levels based on user preferences and schedule availability
- Streamlined onboarding by deriving Bayesian priors from natural language descriptions using the OpenAI API
- Simplified match planning by syncing recommended matches to users' calendars using the Google Calendar API

Technical Skills

Programming Languages: Kotlin, Java, TypeScript, Python, SQL, HTML/CSS
Frameworks & Libraries: Spring Boot, NestJS, Express, Prisma, React, Next.js, Tailwind CSS
Databases: PostgreSQL, Supabase, Redis
Cloud & DevOps: Azure, Vercel, Railway, Docker, GitHub Actions
AI/ML: Claude API, OpenAI API, ElevenLabs, Langfuse, Braintrust
Developer Tools: Git/GitHub, Claude Code, Codex
